

# Intro to HTML & CSS

# Objectives

By the end of this lesson you will...

- Have a development environment for creating a website
- Be able to define and explain:
  - HTML
  - CSS
  - Bootstrap
  - CDN
- Create a multi-page responsive website

# Development Environment

# Chrome

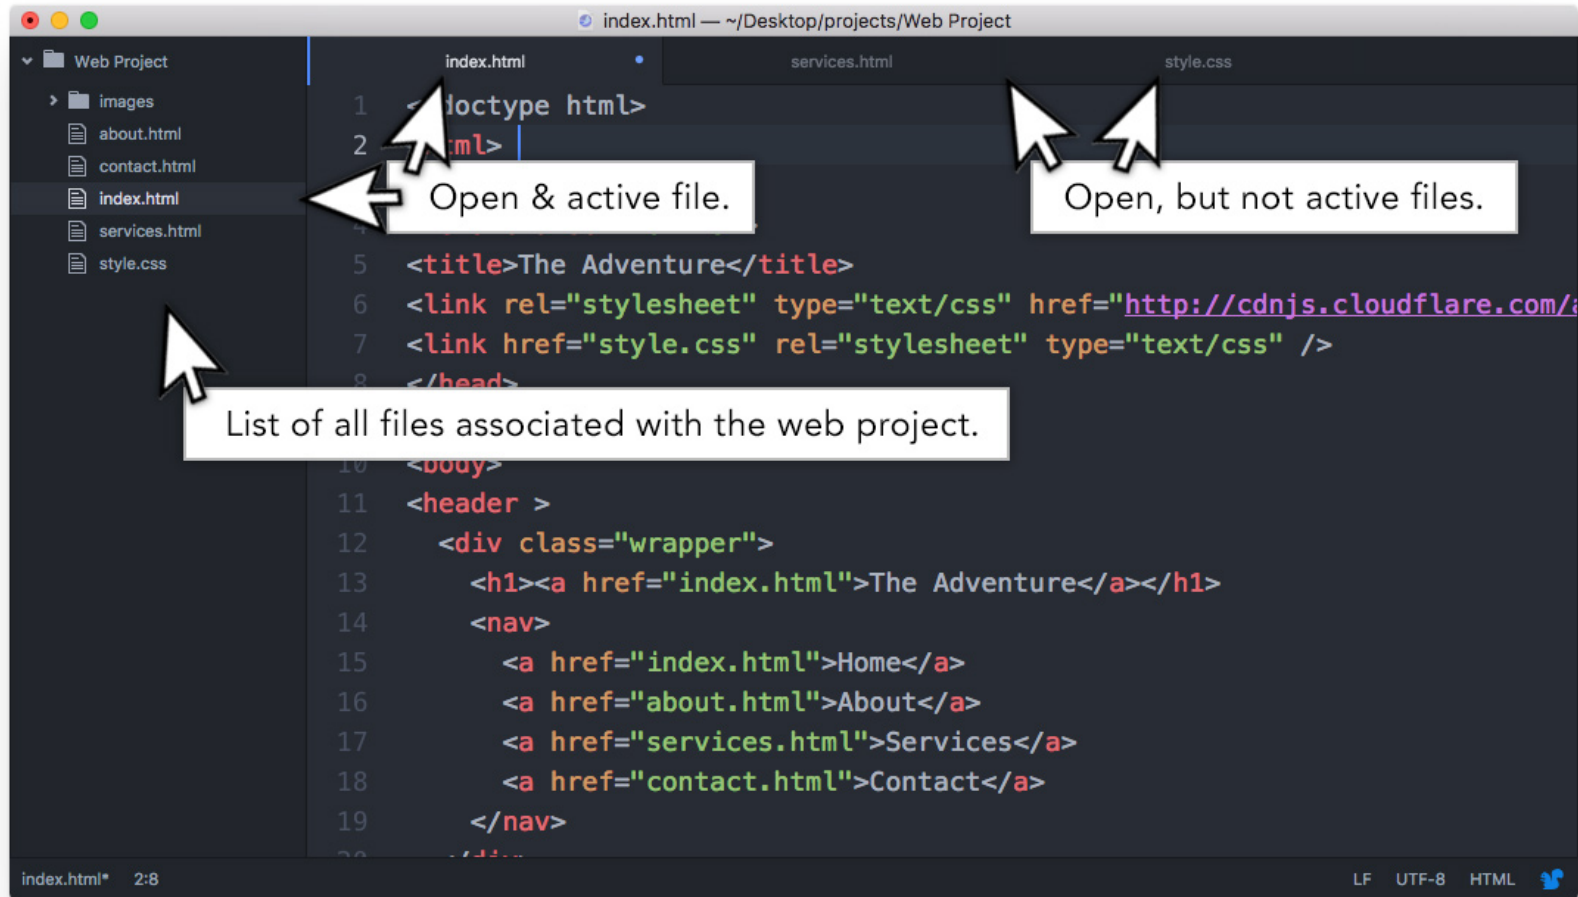

Make sure you have Google Chrome installed.

<http://google.com/chrome>

# Atom

- Install Atom: <https://atom.io/>
- Atom is a text editor that makes writing code much easier!

# Check In

- Do you have Atom installed? <https://atom.io/>
- Are you using Chrome as your browser?  
<http://google.com/chrome>

# Define & Explain

# HTML & CSS, The Building Blocks

- **HTML - Hypertext Markup Language** is the structure/bones
- **CSS - Cascading Style Sheets** give your pages their look and feel

# Think of a Car

HTML is like the doors, windows, tires. seats.

CSS is like the size, color, and other attributes.

# Bootstrap

Bootstrap, quite simply, is a bundles of premade styles that developers can use to speed up web development.

# CDN

- Stands for **content delivery network**.
- A CDN is essentially a computer that a lot of people access that stores the files people need.

# Creating an Online Resume
